 Instruction

Advice & Instructions

- Take small frequent meals.
- Chew food adequately. Do not hurry while having meals. Have timely meals.

Disclaimer:

This prescription is issued on the basis of your inputs during teleconsultation It is valid from the date of issue until the specific period/dosage of each medicine as advised.

- Avoid spicy, deep fried and oily food.
- Bloating: Keep a food diary. This will help you figure out which foods increase gas in your body. After you identify some foods that cause you excessive bloating, you can try to eat less of them or avoid them altogether. Adjust your diet. If your diet includes a large amount of carbohydrates that are difficult to digest, try to replace them. Carbohydrates that are easier to digest, such as rice and bananas, are substitutes that may reduce flatulence. Avoid gas producing foods (eg. cabbage, legumes, onions, broccoli, brussels sprouts, wheat, and potatoes) Eat smaller meals more frequently. Eating around five to six small meals a day instead of three larger ones may be easier on your digestive system. Try to swallow less air. Avoid doing anything that may increase the amount of air that you swallow. This includes making sure that you're chewing your food properly, and avoiding chewing gum, smoking, and straws. Drink lots of water. Staying hydrated can help you avoid constipation, which causes gas. Exercising regularly.
- Contact me through chat (apollo 247 app) if you notice any new or worsening symptoms in the next 5 days.
- Repeat Online consultation after 2 weeks

Follow Up after 14 days
